Week 3 Quiz

LATEST SUBMISSION GRADE

100%

1. What is a Convolution?

1 / 1 point

- ☐ A technique to filter out unwanted images
- ☐ A technique to make images bigger
- ☐ A technique to make images smaller
- ☒ A technique to isolate features in images

✓ Correct

2. What is a Pooling?

1 / 1 point

- ☐ A technique to make images sharper
- ☒ A technique to reduce the information in an image while maintaining features
- ☐ A technique to combine pictures
- ☐ A technique to isolate features in images

✓ Correct

3. How do Convolutions improve image recognition?

1 / 1 point

- ☐ They make the image clearer
- ☒ They isolate features in images
- ☐ They make the image smaller
- ☐ They make processing of images faster

✓ Correct

4. After passing a 3x3 filter over a 28x28 image, how big will the output be?

1 / 1 point

- ☐ 25x25
- ☒ 26x26
- ☐ 28x28
- ☐ 31x31

✓ Correct

5. After max pooling a 26x26 image with a 2x2 filter, how big will the output be?

1 / 1 point

- ☐ 56x56

✓

☐ 26x26

☒ 13x13

☐ 28x28

✓ Correct

6. Applying Convolutions on top of our Deep neural network will make training:

1 / 1 point

☐ Faster

☐ Slower

☒ It depends on many factors. It might make your training faster or slower, and a poorly designed Convolutional layer may even be less efficient than a plain DNN!

☐ Stay the same

✓ Correct
